LP GAS IS A SAFE, CLEAN, INSTANT, PORTABLE AND AFFORDABLE ENERGY SOLUTION. HOWEVER, TO ENSURE YOUR SAFETY, ALWAYS BUY GAS FROM A FULLY COMPLIANT LP GAS DISTRIBUTOR THAT ONLY SELLS LEGALLY FILLED CYLINDERS.

Do Not Buy Illegally Refilled or Traded Gas Cylinders

Your safety - and that of your family and community - should never be compromised. Purchasing illegally refilled commercially branded gas cylinders from unauthorized sources is dangerous, irresponsible, and unlawful.

Why are Illegally filled cylinders cheaper?

More often than not, the cylinder you purchase is underfilled; you receive less gas than you pay for.

- **Inconsistent Cylinder Colours** : Beware if you receive cylinders in various colours. Legitimate distributors adhere to consistent branding.
- **Unbranded Seals on Valves** : If the valve is sealed with an unbranded plastic seal that does not match the cylinder caution should be exercised. Trustworthy distributors utilise seals that have the same branding as the cylinder.
- **Suspiciously Low Prices** : If prices seem too cheap to be true, exercise caution. Dishonest suppliers may short change you with under filled cylinders or contaminated gas.
- **No proper invoicing** : Lack of proper invoice is a red flag. Reputable distributors offer clear and traceable paperwork.
- **Mixed Cylinder Brands on Delivery Trucks** : Take note if the delivery vehicle carries cylinders of different brands. Established distributors usually have a uniform brand lineup.
